PT New humanised anti-CEA monoclonal antibody - having engrafted murine
PT CDRs, used for diagnosis, imaging and therapy of CEA-producing cancers.
XX
PS Claim 5; Page 39; 62pp; English.
XX
CC New humanised monoclonal antibodies (MAbs) comprising the complementary
CC determining regions (CDRs) of a parental murine class III anti-
CC carcinoembryonic (CEA) MAb engrafted to the framework regions (FRs) of a
CC heterologous antibody which can be derived from any species including
CC human, retain the anti-CEA binding specificity of the parental murine MAb
CC but are less immunogenic in a human subject than the parental MAb. The
CC humanised antibodies can be used in diagnosis, imaging and therapy of CEA
CC -producing cancers and patients receiving the humanised antibodies and
CC conjugates show improved therapeutic results, decreased immune responses
CC and decreased immune-mediated adverse effects compared to the parent
CC antibody. This sequence is a murine derived CDR region which corresponds
CC to CDR 3 in the heavy chain of the humanised MAb. See AAR97313-97333

PT Treating non-medullary thyroid carcinoma or medullary thyroid carcinoma
PT comprises administering, either concurrently or sequentially, Class III
PT anti-CEA (carcinoembryonic antigen) monoclonal antibody or fragment and
PT therapeutic agent(s).
XX
PS Claim 6; SEQ ID NO 25; 88pp; English.
XX
CC The invention relates to a method of treating a non-medullary thyroid
CC carcinoma or treating medullary thyroid carcinoma involves administering
CC to a subject, either concurrently or sequentially, a Class III anti-CEA
CC (carcinoembryonic antigen) monoclonal antibody or its fragment and at
CC least one therapeutic agent. The antibody or its fragment comprises the
CC complementarity-determining regions (CDRs) of a murine MN-14 monoclonal
CC antibody. (I) is useful for treating medullary thyroid carcinoma or non-
CC medullary thyroid carcinoma such as pancreatic cancer, breast cancer,
CC ovarian cancer, in a subject. This sequence corresponds to the CDR3 of
CC the murine MN-14 antibody heavy chain variable region and used to
CC generate the humanised/chimeric antibody of the invention.

PT   Treating non-medullary or medullary thyroid carcinoma, involves
PT   administering to subject, either concurrently or sequentially, anti-
PT   carcinoembryonic antigen antibody or its fragment and therapeutic agent.
XX
PS   Claim 8; Page 76; 122pp; English.
XX
CC   This invention relates to methods for treating cancers that express
CC   carcinoembryonic antigens (CEAs). Specifically, it refers to antibody
CC   therapy and in particular anti-carcinoembryonic antigen (anti-CEA)
CC   antibodies that can be used following administration of an agent that
CC   will increase antibody effector functions or following administration of
CC   an amount of interferon effective to upregulate CEA expression in tumour
CC   cells. The present invention describes the anti-CEA antibody as a class
CC   III humanised murine monoclonal antibody that retains specificity for CEA
CC   binding and is preferably an MN-14 antibody or fragment thereof.
CC   Accordingly, hMN-14 can be formulated into a cytostatic pharmaceutical
CC   composition useful for the treatment of non-medullary or medullary
CC   thyroid carcinoma, colorectal cancer, gastric cancer, hepatocellular
CC   carcinoma, as well as breast or lung cancer. Furthermore, it can
CC   stimulate antibody-dependent cell-mediated cytotoxicity, complement-
CC   mediated lysis and apoptosis as well as inhibit cell cycle progression,
CC   cell growth and angiogenesis. This peptide sequence is a CDR region of
CC   the humanised murine MN-14 antibody of the invention.

XX
CC The invention relates to a method of treating a non-medullary thyroid
CC carcinoma or treating medullary thyroid carcinoma involves administering
CC to a subject, either concurrently or sequentially, a Class III anti-CEA
CC (carcinoembryonic antigen) monoclonal antibody or its fragment and at
CC least one therapeutic agent. The antibody or its fragment comprises the
CC complementarity-determining regions (CDRs) of a murine MN-14 monoclonal
CC antibody. (I) is useful for treating medullary thyroid carcinoma or non-
CC medullary thyroid carcinoma such as pancreatic cancer, breast cancer,
CC ovarian cancer, in a subject. This sequence corresponds to the humanised
CC murine MN-14 antibody heavy chain variable region.

XX
PS Disclosure; Fig 23b; 122pp; English.
XX
CC This invention relates to methods for treating cancers that express
CC carcinoembryonic antigens (CEAs). Specifically, it refers to antibody
CC therapy and in particular anti-carcinoembryonic antigen (anti-CEA)
CC antibodies that can be used following administration of an agent that
CC will increase antibody effector functions or following administration of
CC an amount of interferon effective to upregulate CEA expression in tumour
CC cells. The present invention describes the anti-CEA antibody as a class
CC III humanised murine monoclonal antibody that retains specificity for CEA
CC binding and is preferably an MN-14 antibody or fragment thereof.
CC Accordingly, hMN-14 can be formulated into a cytostatic pharmaceutical
CC composition useful for the treatment of non-medullary or medullary
CC thyroid carcinoma, colorectal cancer, gastric cancer, hepatocellular
CC carcinoma, as well as breast or lung cancer. Furthermore, it can
CC stimulate antibody-dependent cell-mediated cytotoxicity, complement-
CC mediated lysis and apoptosis as well as inhibit cell cycle progression,
CC cell growth and angiogenesis. This polypeptide sequence is the humanised
CC murine MN-14 antibody heavy chain variable region protein of the
CC invention.

PT   New chimeric molecule from humanized antibody against carcinoembryonic
PT   antigen and having signaling molecules of T cells and other effector
PT   cells, useful for the treatment of colorectal, breast and lung cancers.
XX
PS   Disclosure; Page 9; 20pp; English.
XX
CC   The invention relates to a chimaeric molecule comprising the
CC   carcinoembryonic antigen (CEA) binding domain of humanised antibody MN14
CC   as a single chain antibody with a (GGSGS)3 linker, the zeta signaling
CC   chain of the T cell receptor (TCR) and an intervening CD8alpha hinge in
CC   which the cysteine residues have been mutated, with the IgTCR molecule
CC   occupying nucleotides 2426-3766 of the retroviral vector sequence.
CC   appearing as ABX13168. The new chimaeric molecule expressed in T cells,
CC   NK (not defined) or other effector cells are useful in treating patients
CC   with cancers expressing the CEA antigen, together with other or with
CC   heterologous constructs to engage additional stimulatory and functional
CC   properties of the effector cells to enhance the anti-tumour therapeutic
CC   efficacy. The cancer disorder includes colorectal, breast and lung
CC   cancers. The present sequence represents the heavy chain variable, VH,
CC   region of antibody hMN14. The VH protein is humanised (complementarity
CC   determining region-grafted) and has a leader peptide

CC   The present sequence is the protein sequence of hMN-14-0, which is
CC   designed to form an hMN-14 triabody. The hMN-14-0 polypeptide comprises
CC   the C-terminal end of anti-carcinoembryonic antigen (CEA) humanized
CC   monoclonal antibody hMN-14 VH joined to the N-terminal part of hMN-14
CC   Vkappa without a peptide linker. The use of the zero linker enables the
CC   secreted polypeptide to form a triabody, forming 3 binding sites for CEA.
CC   The polypeptide also includes a pelB signal peptide, which precedes the
CC   VH moiety to facilitate synthesis of the polypeptide in the periplasmic
CC   space of Escherichia coli, and a 6xHis C-terminal tag to aid
CC   purification. This monospecific triabody is an example of claimed
CC   multivalent binding proteins specific for a tumour-associated antigen.
CC   The binding proteins are used in the diagnosis and treatment of a tumour,
CC   carcinoma, melanoma, sarcoma, neuroblastoma, leukaemia, glioma, lymphoma
CC   or myeloma, or a cancer selected from acute lymphoblastic leukaemia,
CC   acute myelogenous leukaemia, biliary, breast, cervical, chronic
CC   lymphocytic leukaemia, chronic myelogenous leukaemia, colorectal,
CC   endometrial, oesophageal, gastric, head and neck, Hodgkin's lymphoma,
CC   lung, medullary thyroid, non-Hodgkin's lymphoma, ovarian, pancreatic,
CC   prostate and bladder

PT   New kit comprising a multivalent, multi-specific binding protein and a
PT   carrier molecule, useful for delivering a diagnostic/therapeutic agent
PT   for treating cancer, and cardiovascular, immune, inflammatory, or
PT   infectious diseases.
XX
PS   Disclosure; Fig 28; 87pp; English.
XX
CC   The present sequence is the protein sequence of a 679 mutant diabody in
CC   which antibody 679 VH has a Gln for Ile amino acid substitution at
CC   position 3 and a Ser for Gln amino acid substitution at position 101.
CC   Murine monoclonal antibody 679 binds with high affinity to molecules
CC   containing the moiety histamine-succinyl-glycyl (HSG). The present
CC   polypeptide comprises: 679 VH(I3Q) linked to 679 Vk via a peptide linker
CC   (enables the secreted polypeptide to dimerise into a diabody, forming 2
CC   sites for HSG); a pelB leader signal peptide (facilitates transport of
CC   the polypeptide into the periplasmic space of Escherichia coli); and 6
CC   His residues (allows purification by IMAC). The 679 diabody was expressed
CC   in E. coli at a level of 10 ug/l of culture, compared with 1 ug/l for the
CC   non-mutant polypeptide. The invention provides a bispecific diabody
CC   comprising an HSG binding site and a carcinoembryonic antigen (CEA)
CC   binding site. The HSG antigen binding site may comprise the VH and Vk
CC   polypeptides of 679 MAb. These diabodies are produced via recombinant DNA
CC   technology and create a novel affinity enhancement system that shows
```

```
CC   specific affinity for HSG and CEA. They pre-target CEA positive tumours
CC   for subsequent specific delivery of therapeutic radioisotopes carried by
CC   HSG-carrying peptides. Cancer, autoimmune diseases, infectious disease,
CC   cardiovascular diseases and inflammatory diseases can be detected or
CC   treated using the methods of the invention

XX
CC   The present sequence is the protein sequence of hMN-14-scFv-L5, which was
CC   designed to form an hMN-14 diabody. The hMN-14-scFv-L5 polypeptide
CC   comprises the C-terminal end of anti-carcinoembryonic antigen (CEA)
CC   humanized monoclonal antibody hMN-14 VH linked to the N-terminal part of
CC   hMN-14 Vkappa by a peptide linker that enables the secreted polypeptide
CC   to dimerize into a diabody, forming 2 binding sites for CEA. The
CC   polypeptide also includes a pelB signal peptide, which precedes the VH
CC   moiety to facilitate synthesis of the polypeptide in the periplasmic
CC   space of Escherichia coli, and a 6xHis C-terminal tag to aid
CC   purification. In the claimed monospecific diabody, each scFv comprises
CC   the present sequence. The diabody is an example of claimed multivalent
CC   binding proteins specific for a tumour-associated antigen. The binding
CC   proteins are used in the diagnosis and treatment of a tumour, carcinoma,
CC   melanoma, sarcoma, neuroblastoma, leukaemia, glioma, lymphoma or myeloma,
CC   or a cancer selected from acute lymphoblastic leukaemia, acute
CC   myelogenous leukaemia, biliary, breast, cervical, chronic lymphocytic
CC   leukaemia, chronic myelogenous leukaemia, colorectal, endometrial,
CC   oesophageal, gastric, head and neck, Hodgkin's lymphoma, lung, medullary
CC   thyroid, non-Hodgkin's lymphoma, ovarian, pancreatic, prostate and
CC   bladder

PT   antigen.
XX
```

```
PS   Claim 11; Fig 6; 43pp; English.
XX
CC   The present invention describes a multivalent, multi-specific binding
CC   protein (I) comprising a first binding site having an affinity towards a
CC   hapten group and a second and a third binding sites each having affinity
CC   towards a target antigen, which may be the same or a different target
CC   antigen. (I) has cytostatic, immunosuppressive, antimicrobial, cardiant
CC   and antiinflammatory activities, and can be used in immunotherapy. (I) is
CC   useful for delivering a diagnostic agent, a therapeutic agent, or its
CC   combination to a target, which involves administering (I) to a subject,
CC   waiting for a sufficient amount of time for an amount of the non-binding
CC   protein to clear the subject's blood stream, and administering to the
CC   subject a carrier molecule comprising a diagnostic agent, a therapeutic
CC   agent, or its combination, that binds to a binding site of the binding
CC   protein. (I) is also useful for detecting or treating a human disorder,
CC   preferably cancer, autoimmune diseases, infectious diseases,
CC   cardiovascular diseases and inflammatory diseases. The present sequence
CC   represents a hMN14-scFv-L5 amino acid sequence, which is used in the
CC   exemplification of the present invention

PT   New kit comprising a multivalent, multi-specific binding protein and a
PT   carrier molecule, useful for delivering a diagnostic/therapeutic agent
PT   for treating cancer, and cardiovascular, immune, inflammatory, or
PT   infectious diseases.
XX
PS   Claim 14; Fig 31; 87pp; English.
XX
CC   The present sequence is the protein sequence for polypeptide #2 of a
CC   novel bispecific diabody comprising the VH region of monoclonal antibody
CC   hMN14 and the Vk region of monoclonal antibody 679. Mouse antibody 679
CC   binds with high affinity to molecules containing the moiety histamine-
CC   succinyl-glycyl (HSG). Humanised antibody hMN14 binds specifically to
CC   carcinoembryonic antigen. The bispecific diabody can be produced using
CC   recombinant DNA methods, e.g. in Escherichia coli host cells. It provides
CC   a novel affinity enhancement system that shows specific affinity for HSG
CC   and CEA. Such bispecific diabodies pre-target CEA positive tumours for
CC   subsequent specific delivery of therapeutic radioisotopes carried by HSG-
CC   carrying peptides. Cancer, autoimmune diseases, infectious disease,
CC   cardiovascular diseases and inflammatory diseases can be detected or
CC   treated using the methods of the invention

CC   The present sequence is the protein sequence for polypeptide #2 of novel
CC   bispecific diabody BS1.5H comprising the VH region of monoclonal antibody
CC   hMN14 and the Vk region of monoclonal antibody 679. Mouse antibody 679
CC   binds with high affinity to molecules containing the moiety histamine-
CC   succinyl-glycyl (HSG). A humanised version of its VH and Vk sequences
CC   have been used in BS1.5H. Humanised antibody hMN14 binds specifically to
CC   carcinoembryonic antigen (CEA). The bispecific diabody can be produced
CC   using recombinant DNA methods, e.g. in Escherichia coli host cells. It
CC   provides a novel affinity enhancement system that shows specific affinity
CC   for HSG and CEA. Such bispecific diabodies pre-target CEA positive
CC   tumours for subsequent specific delivery of therapeutic radioisotopes
CC   carried by HSG-carrying peptides. Cancer, autoimmune diseases, infectious
CC   disease, cardiovascular diseases and inflammatory diseases can be
CC   detected or treated using the methods of the invention

PT Polyvalent protein complex for treating B-cell malignancy, Anthrax
PT bacillus, Alzheimer's disease, reovirus, Microsporum, has polypeptide
PT chains having immunoglobulin variable domains, to form complex having
PT three antigen binding sites.
XX
PS Example 2; SEQ ID NO 12; 148pp; English.
XX
CC The invention relates to a polyvalent protein complex (PPC) (I),
CC comprising a first and second polypeptide chains having immunoglobulin
CC variable domains, where the first and second polypeptide chains form a
CC complex having three antigen binding sites, and where each binding site
CC comprises an immunoglobulin heavy and light chain variable domain. (I) is
CC useful in pretargeting method of treating or diagnosing, or treating and
CC diagnosing a neoplastic condition such as carcinomas, sarcomas, gliomas,
CC lymphomas, leukemias or melanomas. (I) is useful for treating B-cell
CC malignancy, or B-cell immune or autoimmune disorder in a subject. (I) is
CC also useful for diagnosing a non-neoplastic disease or disorder where the
CC disease or disorder is caused by a fungus, a virus, a bacterium, a
CC mycoplasma, a parasite e.g. malaria, an autoimmune disease, myocardial
CC infarction, ischemic heart disease, atherosclerotic plaques, graft
CC rejection, Alzheimer's disease or inflammation caused by accretion of
CC activated granulocytes, monocytes, lymphoid cells or macrophages at the
CC site of inflammation (caused by infectious agent). (I) is useful in
CC antibody dependent enzyme prodrug therapy (ADEPT), for detecting target

```
CC   molecule, and immunostaining technique. This sequence corresponds to the
CC   chimeric hBS14 polypeptide 2 containing heavy and light chain variable
CC   regions.

PT   Polyvalent protein complex for treating B-cell malignancy, Anthrax
```

PT bacillus, Alzheimer's disease, reovirus, Microsporum, has polypeptide
PT chains having immunoglobulin variable domains, to form complex having
PT three antigen binding sites.
XX
PS Example 1; SEQ ID NO 1; 148pp; English.
XX
CC The invention relates to a polyvalent protein complex (PPC) (I),
CC comprising a first and second polypeptide chains having immunoglobulin
CC variable domains, where the first and second polypeptide chains form a
CC complex having three antigen binding sites, and where each binding site
CC comprises an immunoglobulin heavy and light chain variable domain. (I) is
CC useful in pretargeting method of treating or diagnosing, or treating and
CC diagnosing a neoplastic condition such as carcinomas, sarcomas, gliomas,
CC lymphomas, leukemias or melanomas. (I) is useful for treating B-cell
CC malignancy, or B-cell immune or autoimmune disorder in a subject. (I) is
CC also useful for diagnosing a non-neoplastic disease or disorder where the
CC disease or disorder is caused by a fungus, a virus, a bacterium, a
CC mycoplasma, a parasite e.g. malaria, an autoimmune disease, myocardial
CC infarction, ischemic heart disease, atherosclerotic plaques, graft
CC rejection, Alzheimer's disease or inflammation caused by accretion of
CC activated granulocytes, monocytes, lymphoid cells or macrophages at the
CC site of inflammation (caused by infectious agent). (I) is useful in
CC antibody dependent enzyme prodrug therapy (ADEPT), for detecting target
CC molecule, and immunostaining technique. This sequence corresponds to the
CC chimeric BS14HP polypeptide 1 containing heavy and light chain variable
CC regions. The encoded polypeptide is designated alpha-factor-h679Vh-GGGGS-
CC hMN-14Vk-LEGGGS-hMN-14Vh-6-His where the hMN14 is from a humanized
CC antibody that binds specifically to the carcinoembryonic antigen and the
CC h679 is a monoclonal antibody that binds the tri-peptide moiety histamine
CC -succinyl-glycyl (HSG).

PT Novel multivalent, multi-specific binding protein useful for treating
PT cancer, has first binding site having affinity towards hapten group and
PT second and third binding sites each having affinity towards target
PT antigen.
XX
PS Claim 48; Fig 8A-B; 43pp; English.
XX
CC The present invention describes a multivalent, multi-specific binding
CC protein (I) comprising a first binding site having an affinity towards a
CC hapten group and a second and a third binding sites each having affinity
CC towards a target antigen, which may be the same or a different target
CC antigen. (I) has cytostatic, immunosuppressive, antimicrobial, cardiant
CC and antiinflammatory activities, and can be used in immunotherapy. (I) is
CC useful for delivering a diagnostic agent, a therapeutic agent, or its
CC combination to a target, which involves administering (I) to a subject,
CC waiting for a sufficient amount of time for an amount of the non-binding
CC protein to clear the subject's blood stream, and administering to the
CC subject a carrier molecule comprising a diagnostic agent, a therapeutic
CC agent, or its combination, that binds to a binding site of the binding
CC protein. (I) is also useful for detecting or treating a human disorder,
CC preferably cancer, autoimmune diseases, infectious diseases,
CC cardiovascular diseases and inflammatory diseases. The present sequence
CC represents the TS1 VH chain amino acid sequence, which is used in the
CC exemplification of the present invention

PT New chimeric molecule from humanized antibody against carcinoembryonic
PT antigen and having signaling molecules of T cells and other effector
PT cells, useful for the treatment of colorectal, breast and lung cancers.
XX
PS Disclosure; Page 7-8; 20pp; English.
XX
CC The invention relates to a chimaeric molecule comprising the
CC carcinoembryonic antigen (CEA) binding domain of humanised antibody MN14
CC as a single chain antibody with a (GGSGS)3 linker, the zeta signaling
CC chain of the T cell receptor (TCR) and an intervening CD8alpha hinge in
CC which the cysteine residues have been mutated, with the IgTCR molecule
CC occupying nucleotides 2426-3766 of the retroviral vector sequence.
CC appearing as ABX13168. The new chimaeric molecule expressed in T cells,
CC NK (not defined) or other effector cells are useful in treating patients
CC with cancers expressing the CEA antigen, together with other or with
CC heterologous constructs to engage additional stimulatory and functional
CC properties of the effector cells to enhance the anti-tumour therapeutic
CC efficacy. The cancer disorder includes colorectal, breast and lung
CC cancers. The present sequence represents the chimaeric molecule of the
CC invention

PT New chimeric molecule useful in treating patients with disorders, such as
PT melanoma, neuroendocrine disorders, prostate and small cell lung cancer
PT comprises GD3 and/or PSMA binding domains of antibody.
XX
PS Disclosure; Page 7-8; 35pp; English.
XX
CC The invention relates to a chimaeric molecule comprising the GD3
CC (ganglioside antigen) binding domain of antibody MB3.6, with any of 3
CC variable gene sequences, or the PSMA (prostate-specific membrane antigen)
CC binding domain of antibody 3D8, 4D4 and 3E11, with variable gene
CC sequences, the zeta signalling chain of the T cell receptor and an
CC intervening CD8alpha hinge in which cysteine residues have been mutated.
CC The chimaeric molecules expressed in T cells or NK cells or other
CC effector cells are useful in treating patients with cancers expressing
CC the GD3 (MB3.6 derivatives) or PSMA antigen (3D8, 4D4, 3E11 derivatives),
CC and/or together with each other or with heterologous constructs to engage
CC additional stimulatory and functional properties of the effector cells to
CC enhance the antitumour therapeutic efficacy (claimed). They are
CC particularly useful in disorders including melanoma, neuroendocrine
CC tumours and prostate and small cell lung cancer. The present sequence is
CC a hMN14 antibody (specific to CEA antigen) in a fusion protein with the
CC modified CD8alpha hinge and the T-cell receptor zeta chain (IgTCR)
CC encoded by a retroviral vector. The hMN14 antibody coding region is
CC replaced with the MB3.6, 3D8, 4D4 or 3E11 genes of the invention.

PT New antibody library comprising cells comprising at least one integrated
PT retroviral vector expressing an antibody light or heavy chain, useful in
PT preparing a composition for diagnosing or treating disorders.
XX
PS Disclosure; Fig 6; 57pp; English.

XX
CC This invention relates to a new antibody library which comprises at least
CC 100 cells, each of which comprises at least one integrated retroviral
CC vector expressing an antibody light or heavy chain. Antibodies are of
CC increasing importance in human therapy, assay procedures and diagnostic
CC methods and a need exists for efficient methods of generating and
CC screening antibody libraries containing large numbers of antibodies. The
CC antibody library of the invention addresses this need, with the
CC additional advantage of strict control over multiplicity of infection
CC (MOI), and is useful in preparing a composition for diagnosing or
CC treating a wide variety of disorders. The present sequence is the amino
CC acid sequence of the MN14HCF protein, which was encoded by the Gateway
CC retroviral vectors used in the exemplification of the invention.

PT Mutant bispecific antibody which is rapidly cleared from a patient's
PT body, useful as a pretargeting agent in methods for diagnosing or
PT treating diseases, such as autoimmune disease, and disease caused by
PT infectious agents.
XX
PS Example; Fig 1; 68pp; English.
XX
CC The invention relates to a mutant bispecific antibody (mbAb1) comprising
CC at least a human hinge constant region from immunoglobulin G (IgG), two
CC single chain variable fragments (scFvs), and two variable fragments
CC (Fvs), where the constant region contains one or more amino acid
CC mutations in the heavy chain 2 (CH2) domain. The methods and antibody of
CC the invention are used to diagnose or treat an immune dysregulation
CC disease, an autoimmune disease, organ graft rejection, cardiovascular
CC disease, neurological disease (Alzheimer's disease) or graft vs. host
CC disease. The methods are also useful for treating a disease caused by a
CC fungus, virus, parasite, or bacterium. The methods may also be used for
CC intraoperative or endoscopic diagnosis to identify diseased tissue. The
CC autoimmune diseases that may be diagnosed or treated include acute or
CC chronic idiopathic thrombocytopenic purpura, dermatomyositis, Sydenham's
CC chorea, myasthenia gravis, systemic lupus erythematosus, lupus nephritis,
CC rheumatic fever, polyglandular syndromes and diabetes mellitus. The
CC current sequence represents the hMN-14 heavy chain amino acid sequence.

PT Composition useful as cancer vaccine, comprises polypeptide having
PT antibody heavy chain fused to antibody light chain, or multivalent
PT antibody having two polypeptides with antibody heavy chain fused to
PT antibody light chain.
XX
PS Disclosure; SEQ ID NO 3; 101pp; English.
XX
CC The invention describes a composition (I) comprising: (a) a polypeptide
CC comprising at least one antibody heavy chain fused to at least one
CC antibody light chain; or (b) a multivalent antibody comprising at least
CC two polypeptides, where each of the polypeptides comprises at least one
CC antibody heavy chain fused to at least one antibody light chain. Also
CC described: (1) a composition (II) comprising a nucleic acid comprising at
CC least one antibody heavy chain gene and at least one antibody light chain
CC gene, where the nucleic acid encodes a polypeptide comprising at least
CC one antibody heavy chain fused to at least one antibody light chain; (2)
CC a method (M1) of binding an antigen, involves providing a polypeptide

CC comprising at least one antibody heavy chain fused to at least one
CC antibody light chain, and contacting the polypeptide with a sample having
CC an antigen under conditions such that the polypeptide binds to the
CC antigen; (3) a method (M2), which involves providing a vector comprising
CC a bicistronic expression construct comprising genes encoding an antibody
CC heavy chain gene and an antibody light chain gene, and altering the
CC nucleic acid sequence of a splice acceptor sequence or a splice donor
CC sequence in the antibody light chain gene or the antibody heavy chain
CC gene under conditions such that splicing is prevented at the splice
CC acceptor sequence or donor sequence; (4) a nucleic acid sequence produced
CC by (M2); (5) a vector (III) comprising a modified antibody heavy or light
CC gene, where modification eliminates a splice donor or acceptor sequence
CC in antibody heavy or light chain gene; and (6) a host cell comprising
CC (III). (I) is useful in in vitro binding assays for identifying antigens
CC in a mixture or determining the presence or absence of expression of a
CC particular protein. (I) is also useful as vaccine for treating cancer and
CC infections caused by pathogens e.g. virus or bacteria. The present
CC sequence represents an exemplary antibody fusion protein from the present
CC invention.

PT Prodn. of bi:specific, tetra:valent antibodies - by recombinant
PT expression of DNA encoding variable heavy and light immunoglobulin
PT chains.
XX
PS Example 1; Page 19; 33pp; English.
XX
CC The anti-dansyl single chain antibody was produced using PCR to join two
CC variable regions by overlap extension. A flexible linker region
CC consisting of three gly-gly-gly-gly-ser repeats was used to connect the C
CC -terminus of the heavy chain variable region (Vh) and the N-terminus of
CC the light chain variable region (Vl) in order to maximise flexibility
CC while minimising steric hindrance during protein folding. For the PCR
CC reaction, the 3' primer for Vh (AAQ86751) and the 5' primer for Vl
CC (AAQ86752) were designed to have a complementary region in the linker
CC portion. The Vh and Vl regions were independently amplified, followed by
CC a second PCR reaction in which these products were used as templates. The
CC complementary sequences in the linker were hybridised, joining the V
CC regions and two primers (AAQ86753, AAQ86754) were then used to amplify
CC the single chain antibody. (Updated on 25-MAR-2003 to correct PN field.)

CC This invention describes a novel retroviral packing cell (I), comprising
CC the retroviral genes gag, pol and glycoproteins GP-1 and GP-2 of the LCMV
CC coding gene gp, or a part of these. The products of the invention have
CC anti-HIV and cytostatic activity and can be used for gene therapy. (I) is
CC useful for in vitro infection of cells, especially hematopoietic stem
CC cells, for expression of transgenes in cells and as a pharmaceutical
CC carrier for gene therapy. (I) is therefore useful in the treatment of
CC infectious diseases (HIV or AIDS), neoplasms (carcinomas), melanomas and
CC other diseases. This sequence represents a Lymphocytic choriomeningitis
CC virus (LCMV) L-protein which is described in the method of the invention

PT   Anti-DNA antibody which specifically binds DNA hairpin - useful to
PT   develop prods. for diagnosis and treatment of disorders, e.g.
PT   glomerulonephritis or systemic lupus erythematosus.
XX
PS   Example; Fig 7; 102pp; English.
XX
CC   The present sequence is the heavy chain variable region of the anti-DNA
CC   monoclonal antibody (MAb) 10f4, which has a high affinity for single
CC   stranded DNA, low or no affinity for double stranded DNA and specifically
CC   binds a DNA hairpin. The MAb can be used diagnose disorders associated
CC   with the pathological complexation of DNA, e.g. inflammatory
CC   glomerulonephritis and systemic lupus erythematosus. It can also be used
CC   to generate reagents to screen for pharmaceutical agents, and treat
CC   and/or prevent an above disorder. Calf thymus DNA was used to immunise a
CC   MRL-1pr mouse, spleen cells from which were then fused with Sp2/0 myeloma
CC   cells to give hybridomas producing the anti-DNA MAb. 10f4 was found to
CC   react strongly with single stranded DNA and poly(dT), moderately with
CC   poly(dG) and weakly with poly(dI). (Updated on 27-AUG-2003 to correct OS
CC   field.)

XX
CC The present invention describes substantially purified human proteins
CC (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1
CC in the specification). ABN15762 to ABN27252 encode the human ORFX
CC proteins given in ABP00010 to ABP11500. ORFX proteins are useful for
CC treating or preventing a pathology associated with an ORFX-associated
CC disorder in humans, and in the manufacture of a medicament for treating a
CC syndrome associated with ORFX-associated disorder. ORFX polynucleotide
CC sequences can be used in gene therapy. ORFX sequences can be used in the
CC treatment of cancer, hyperproliferative disorders, cirrhosis of liver,
CC psoriasis, benign tumours, keloid, degenerative disorders, haemorrhage,
CC osteoarthritis, neurodegenerative disorders, disorders related to organ
CC transplantation, cardiovascular diseases, diabetes mellitus, systemic
CC lupus erythematosus, hypertension, hypothyroidism, cholesterol ester
CC storage disease, various immune deficiencies and disorders, infectious
CC diseases, autoimmune disorders such as multiple sclerosis, rheumatoid
CC arthritis, autoimmune thyroiditis, myasthenia gravis, graft-versus-host
CC disease and autoimmune inflammatory eye disease. ORFX proteins are also
CC useful for treating burns, incisions, ulcers, for treating osteoporosis,
CC bone degenerative disorders, or periodontal disease, and for gut
CC protection or regeneration and treatment of lung or liver fibrosis,
CC reperfusion injury in various tissues and conditions resulting from
CC systemic cytokine damage. N.B. The sequence data for this patent did not
CC form part of the printed specification, but was obtained in electronic
CC format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT Novel G-protein coupled receptor polypeptides, for treating and
PT preventing autoimmune/inflammatory disorders, neurological disorders,
PT cell proliferative disorders, cardiovascular disorders and viral
PT infections.
XX
PS Claim 1; Page 118; 141pp; English.
XX
CC The invention describes a novel isolated polypeptide, selected from a
CC group of 21 G-protein coupled receptor polypeptides (GCREC) and useful in
CC vaccines and gene therapy. The polypeptide (I) is useful for screening
CC for agonist or antagonist of (I), compounds specifically binding to (I),
CC or compounds that modulate the activity of (I). The polynucleotide
CC encoding (1) is useful for screening a compound for effectiveness in
CC altering expression of a target polynucleotide comprising (II), by
CC exposing a sample comprising the target polynucleotide to a compound,
CC detecting altered expression of the target polynucleotide, and comparing
CC the expression of the target polynucleotide in the presence of varying
CC amounts of compound and in the absence of the compound. (I) and (II) are
CC useful for diagnosis, treatment and prevention of cell proliferative
CC disorders (e.g. cancers, arteriosclerosis, atherosclerosis), neurological
CC disorders (e.g. epilepsy, stroke, schizophrenic disorders and
CC neuroskeletal disorders), cardiovascular disorders (e.g. hypertension,
CC ischaemic heart disease), gastrointestinal disorders (e.g. anorexia,
CC peptic ulcer), autoimmune/inflammatory disorders (e.g. diabetes mellitus,
CC osteoporosis, psoriasis), and metabolic disorders such as obesity.
CC Furthermore, the polynucleotide is useful; as primers for detecting
CC single nucleotide polymorphisms; as elements in microarray, to monitor or
CC measure protein-protein interactions, drug-target interactions, and gene
CC expression profiles; to generate a transcript image of a tissue or cell
CC type, and to generate hybridisation probes useful in mapping the
CC naturally occurring genomic sequence. This is the G-protein coupled
CC receptor 6 (GCREC-6), one of 21 GCREC proteins described in the method of
CC the invention

PT Predicting a likelihood of developing a stress reward disorder for
PT treating stress related disorders, e.g., cocaine addiction, comprises
PT detecting in the DNA obtained from a subject a human glucocorticoid-
PT induced receptor gene.
XX
PS Claim 12; Page 92-94; 99pp; English.
XX
CC The present invention describes a method for predicting a patient's
CC likelihood of developing a stress reward disorder, comprising: (a)
CC obtaining DNA from a human subject; and (b) detecting in the DNA a human
CC glucocorticoid-induced receptor (GIR) gene, where the gene indicates a
CC potential susceptibility to an addiction reward disorder. GIR has
CC neuroleptic; antialcoholic; antidote. gene therapy. Other methods from
CC the present invention are used for detecting a human GIR receptor gene,
CC detecting a genetic potential susceptibility to a stress reward disorder,
CC detecting the presence of a stress reward disorder susceptibility locus,
CC genetically diagnosing an addiction reward disorder, treating an
CC individual phenotypically diagnosed with an addiction reward disorder,
CC diagnosing GIR receptor sensitisation, identifying a chemical compound
CC that specifically binds to a mammalian GIR receptor, determining whether
CC a mammalian compound is a mammalian GIR receptor agonist or antagonist,
CC and determining whether a chemical compound specifically binds to and
CC activates a mammalian GIR receptor. The method is useful for preparing a
CC composition for treating an individual afflicted with stress related
CC disorders, e.g., polysubstance abuse, or drug, nicotine, alcohol or
CC cocaine addiction. The present sequence represents human GIR, which is
CC used in the exemplification of the present invention

CC adrenergic, thrombin, endothelin, bombesin, endocrine, rhodopsin, opsin,
CC odorant, cytomegaloviral and other G-protein coupled receptors. The
CC receptor proteins were used to design polypeptides, pref. based on the
CC transmembrane domains, for use in G-protein coupled receptor ligand
CC binding assays. The polypeptide fragments retain biological activity such
CC as binding a GPR ligand or modulating GPR ligand binding to a GPR (see
CC AAR48759-R48758, AAR50569-R50807 and AAR89189-R89195 for examples of
CC polypeptide fragments). The polypeptide fragments can be used in
CC compositions for treating subjects suffering from a pathology related to
CC a GPR abnormality e.g. a psychotic disorder such as schizophrenia

PT   New non-infectious nucleic acid construct encoding recombinant antibody
PT   molecule, useful for conferring protective immunity to infectious
PT   diseases, preventing allergic reactions or reactions caused by toxins in
PT   animals.
XX
PS   Example; Page; 29pp; English.
XX
CC   The invention relates to a non-infectious nucleic acid construct encoding
CC   a recombinant (e.g., single chain) antibody molecule. The nucleic acid
CC   construct is adapted for in vivo establishment of protective immunity to
CC   an infectious disease in an animal, or is formulated for in vivo
CC   prevention of an allergic reaction to an allergen or a reaction caused by
CC   the presence of a toxic substance in an animal. Constructs of the
CC   invention are thus useful for treating infectious disease caused by viral
CC   haemorrhagic septicaemia virus (VHSV) (fish), infectious haemotopoietic
CC   necrosis virus (fish), bovine viral diarrhoea virus, pseudorabies virus
CC   (pigs), plasmocytosis virus (mink), feline leukaemia virus, human
CC   immunodeficiency virus, and hepatitis A virus (human). Genetic
CC   prophylaxis methods using such constructs are useful for the transient
CC   protection of individuals against exposure to pathogens or toxins where
CC   no efficient vaccines are available, for inducing the synthesis of
CC   antibodies of a desired specificity for use in immunocompromised
CC   individuals, and for protecting an individual against an allergic
CC   reaction. In contrast to DNA vaccines, including anti- idiotype vaccines,
CC   administration of plasmid-borne genes do not involve specific activation
CC   of the immune system in the individual. Prophylaxis against infectious
CC   diseases takes place without any side effects such as the transfer of
CC   infectious diseases or induction of hypersensitivity following repeated
CC   administration. The single chain antibodies will be systemically
CC   distributed by the body fluids and protect the individual if infection
CC   with the pathogen occurs. The present sequence represents a portion of a
CC   construct of the invention which encodes a single chain antibody, BU1.
CC   BU1 is reactive to the fish pathogenic rhabdovirus, VHSV. BU1 is derived
CC   from the variable regions of the VHSV-reactive murine monoclonal antibody
CC   3F1H10, and also contains the rainbow trout transforming growth factor
CC   beta (TGF-beta) signal peptide at the N- terminus (to ensure secretion of
CC   the single chain antibody) and the human kappa light chain constant
CC   domain (used as a tag to facilitate detection) at the C-terminus. Note:
CC   The present sequence is not shown in the specification, but has been
CC   decoded from the corresponding nucleic acid sequence (AAF76338)

PT   Predicting a likelihood of developing a stress reward disorder for
PT   treating stress related disorders, e.g., cocaine addiction, comprises
PT   detecting in the DNA obtained from a subject a human glucocorticoid-
PT   induced receptor gene.
XX
PS   Claim 12; Fig 1A-C; 99pp; English.
XX
CC   The present invention describes a method for predicting a patient's
CC   likelihood of developing a stress reward disorder, comprising: (a)
CC   obtaining DNA from a human subject; and (b) detecting in the DNA a human
CC   glucocorticoid-induced receptor (GIR) gene, where the gene indicates a
CC   potential susceptibility to an addiction reward disorder. GIR has
CC   neuroleptic; antialcoholic; antidote. gene therapy. Other methods from
CC   the present invention are used for detecting a human GIR receptor gene,
CC   detecting a genetic potential susceptibility to a stress reward disorder,
CC   detecting the presence of a stress reward disorder susceptibility locus,
CC   genetically diagnosing an addiction reward disorder, treating an
CC   individual phenotypically diagnosed with an addiction reward disorder,
CC   diagnosing GIR receptor sensitisation, identifying a chemical compound
CC   that specifically binds to a mammalian GIR receptor, determining whether
CC   a mammalian compound is a mammalian GIR receptor agonist or antagonist,
CC   and determining whether a chemical compound specifically binds to and
CC   activates a mammalian GIR receptor. The method is useful for preparing a
CC   composition for treating an individual afflicted with stress related
CC   disorders, e.g., polysubstance abuse, or drug, nicotine, alcohol or
CC   cocaine addiction. The present sequence represents rat GIR, which is used
CC   in the exemplification of the present invention

PT   Human amygdaloid nucleus-derived G protein coupled receptor - useful for
PT   identifying (ant)agonists used in the treatment of, e.g., Alzheimer's
PT   disease, dementia, angina or epilepsy.
XX
PS   Claim 1; Page 30-31; 58pp; English.
XX
CC   This sequence represents the human amygdaloid nucleus-derived G protein
CC   coupled receptor of the invention. The protein and peptide can be used to
CC   identify agonists or antagonists useful for treating spinal injury,
CC   Alzheimer's disease, asthma, hyperphagia, neuropathy, dementia, pain,
CC   cerebral thrombosis, encephalitis, cerebral infarction, cerebrovascular
CC   spasm, spondylitis, angina, neurosis, drug dependence, drug and alcohol
CC   withdrawal symptoms, schizophrenia, phobia, stroke, anxiety, depression,
CC   respiratory distress syndrome, emesis, epilepsy, etc. The DNA encoding it
CC   can be used to produce the recombinant protein or peptide, to construct
CC   diagnostic probes and primers, and for gene therapy. An antibody directed
CC   against the G protein coupled receptor can be used in immunoassays for
CC   the protein

PT   New human G-protein coupled receptor polypeptides and polynucleotides -
PT   useful as diagnostic reagents and for prevention and treatment of HIV,
PT   cancer and Parkinson's disease.
XX
PS   Claim 11; Page 9; 24pp; English.
XX
CC   This represents a human G-protein coupled receptor (HCEPT09) polypeptide.
CC   The HCEPT09 polypeptide can be recombinantly produced by transforming a
CC   host cell with an expression vector comprising the HCEPT09 nucleic acid.
CC   HCEPT09 polypeptides and polynucleotides are useful for diagnosing
```

CC susceptibility to diseases by detecting mutations in the HCEPT09 gene
CC using probes containing the HCEPT09 nucleotide sequence, and can diagnose
CC diseases associated with HCEPT09 imbalance by determining HCEPT09
CC polypeptide or mRNA expression levels. HCEPT09 can be used to screen for
CC agonists and antagonists which bind the HCEPT09 polypeptide. These can be
CC used in treatment to activate or inhibit HCEPT09 activity, in addition to
CC direct administration of antisense sequences to prevent expression, or
CC HCEPT09 polypeptides to treat conditions associated with a lack of
CC HCEPT09 protein. Gene therapy may also be used to affect endogenous
CC HCEPT09 polypeptide production. HCEPT09 antibodies are useful for
CC inducing an immune response to immunise and prevent diseases, and for
CC isolating HCEPT09 clones or purifying the polypeptides by affinity
CC chromatography. HCEPT09 polypeptides can be administered directly or as a
CC vaccine to inoculate against disease. Diseases diagnosed, prevented or
CC treated include HIV-1 and -2; cancers; anorexia; bulimia; asthma;
CC Parkinson's disease; acute heart failure; hypotension; hypertension;
CC urinary retension; osteoporosis; angina pectoris; myocardial infarction;
CC ulcers; allergies; benign prostatic hypertrophy; neurological and
CC psychotic disorders, including anxiety, schizophrenia, manic depression,
CC delirium, dementia, severe mental retardation and dyskinesias, such as
CC Huntington's disease or Gilles de la Tourette's syndrome. The HCEPT09
CC polypeptide is also useful for mapping the gene to a chromosome, allowing
CC gene inheritance to be studied through linkage analysis

PT Determining modulator of binding of sphingosine-1-PO4 to RP-23 receptor,
PT involves incubating sphingosine-1-PO4 and RP-23 receptor with test
PT compound, determining the binding and comparing with a control.
XX
PS Disclosure; Fig 3; 25pp; English.
XX
CC The present sequence is mouse G-protein coupled receptor (GPCR) RP-23
CC protein. RP-23 is a ligand for sphingosine-1-phosphate (sphingosine-1-
CC PO4) which is formed by the breakdown of sphingolipids and is involved in
CC cell signalling. Sphingosine-1-PO4 causes an increase in receptor-
CC generated adenylyl cyclase activity and an increase in intracellular
CC calcium concentration. The present invention relates to methods for
CC determining whether a test compound modulates interactions between
CC sphingosine-1-PO4 and RP-23 a particular G-protein coupled receptor. The
CC method is useful for determining a modulator which binds sphingosine-1-
CC PO4 to an RP-23 receptor. The compounds identified are useful as
CC therapeutic agents for treating cardiovascular diseases, inflammatory
CC diseases and cancers

PT   Preparing a chimera cDNA library comprises recombinantly expressing cDNA
PT   with a protein translation frame and a cDNA containing a carboxy terminal
PT   side from a stored region of a functional protein synthesized.
XX
PS   Example 7; Fig 6; 24pp; Japanese.
XX
CC   The present sequence is provided in a specification relating to the
CC   preparation of a chimera cDNA library containing a cDNA encoding a
CC   functional protein. The specification describes the preparation of a
CC   serotonin-related cDNA library, and the preparation of a G protein-
CC   coupled receptor chimera cDNA library from which an orphan G protein-
CC   coupled receptor cDNA was isolated

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RT   of the phoPR operon and production of alkaline phosphatases.";
RL   J. Bacteriol. 183:2505-2515(2001).
CC   -!- FUNCTION: Is a secondary, electrogenic Na(+)/H(+) antiporter that
CC       catalyzes Na(+) uptake and proton efflux. Makes modest
CC       contributions to pH homeostasis in the alkaline range of pH but is
CC       not contributor to Na(+) resistance. Appears to have a repressive
CC       effect on growth and on alkaline phosphatases production in the
CC       presence of sodium, by affecting the transcription of the
CC       phoP/phoR two-component regulatory system.
CC   -!- ENZYME REGULATION: The antiport activity is markedly inhibited by
CC       both valinomycin and CCCP, and modestly by nigericin.
CC   -!- SUBCELLULAR LOCATION: Integral membrane protein.
CC   -!- SIMILARITY: Belongs to the nhaC Na(+)/H(+) antiporter family.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT New humanised anti-CEA monoclonal antibody - having engrafted murine
PT CDRs, used for diagnosis, imaging and therapy of CEA-producing cancers.
XX
PS Claim 7; Page 39; 62pp; English.
XX
CC New humanised monoclonal antibodies (MAbs) comprising the complementary
CC determining regions (CDRs) of a parental murine class III anti-
CC carcinoembryonic (CEA) MAb engrafted to the framework regions (FRs) of a
CC heterologous antibody which can be derived from any species including
CC human, retain the anti-CEA binding specificity of the parental murine MAb
CC but are less immunogenic in a human subject than the parental MAb. The
CC humanised antibodies can be used in diagnosis, imaging and therapy of CEA
CC -producing cancers and patients receiving the humanised antibodies and
CC conjugates show improved therapeutic results, decreased immune responses
CC and decreased immune-mediated adverse effects compared to the parent
CC antibody. This sequence corresponds to the first framework region of the
CC light chain of the humanised MAb. See AAR97313-97333

PT A human anti-CD40 monoclonal antibody or fragment useful for inhibiting
PT proliferation, growth or differentiation of a normal human B cells and
PT treating autoimmune disease such as rheumatoid arthritis or systemic
PT lupus erythematosus.
XX
PS Claim 1; Fig 5; 75pp; English.
XX
CC The invention relates to a human monoclonal antibody or fragment capable
CC of specifically binding to a human CD40 antigen (a glycoprotein expressed
CC on the surface of human B cells), where the antibody or fragment is free
CC of significant agonistic activity when it binds to the CD40 antigen, and
CC the growth or differentiation is inhibited. The fragments comprise the
CC complementarity determining region (CDR) of the light and heavy chains of
CC the monoclonal antibodies secreted by a hybridoma consisting of 15B8,
CC 20C4, 12D9, 9F7 and 13E4. Also included are the nucleic acids encoding
CC the antibody (or fragments). The antibodies or fragments are used for
CC inhibiting proliferation, growth or differentiation of a normal human B
CC cells and to inhibit antibody production by B cells. They may also be
CC useful for treating autoimmune diseases, such as systemic lupus
CC erythematosus, psoriasis, multiple sclerosis, inflammatory bowel disease
CC (Crohn's disease), rheumatoid arthritis, and lymphoma (especially Non-
CC Hodgkin's Lymphoma). The present sequence represents the antibody 13E4
CC light chain

PT New antibody specific for treatment and diagnosis of cancer.
XX
PS Claim 2; Fig 2; 82pp; English.
XX
CC This sequence represents a humanised version of the murine COL1 VK chain,
CC designated REIVK, and was used to obtain the humanised antibody (Ab) of
CC the invention. The humanised Ab, or its fragment, specifically binds to
CC carcinoembryonic antigen (CEA). The Ab, optionally coupled to an effector
CC or label, is used to treat or prevent CEA-expressing cancers (e.g. of
CC breast, ovary, lung, stomach, or colon) and to detect CEA-expressing
CC cells, either in vitro (optionally on a solid support) or in vivo
CC (particularly by tumour imaging to identify tumours and metastases before
CC surgery), for diagnosis or prognosis. It is not significantly
CC immunogenic, i.e. the Ab does not induce a human anti-murine antibody or
CC allergic response, or non-specific cytotoxicity, so can be administered
CC repeatedly. It retains specificity for CEA, and has improved clearance
CC (allowing efficient targeting) and metabolic properties

PT   New humanized antibody or humanized antibody fragment that specifically
PT   binds carcinoembryonic antigen CEA, useful for treating CEA-expressing
PT   cancer.
XX
PS   Claim 2; Fig 2; 34pp; English.
XX
CC   The invention discloses a humanised antibody or humanised antibody
CC   fragment that specifically binds the tumour antigen, carcinoembryonic
CC   antigen (CEA). The antigen is expressed by various human carcinomas
CC   including breast, lung and gastrointestinal carcinomas such as stomach
CC   and colon cancers. The humanised antibody fragment is derived from a
CC   murine antibody, COL-1, which has a high affinity for CEA. Also disclosed
CC   is a nucleic acid sequence from which may be expressed the humanised
CC   antibody or humanised antibody fragment and a composition for treating,
CC   or detection of, cancer comprising the humanised antibody or humanised
CC   antibody fragment. The humanised antibody or humanised antibody fragment
CC   is useful for treating CEA-expressing cancer. The sequence presented is
CC   the human REI framework region (FR) variable light domain template. The
CC   FRs are regions of the antibody amino acid sequence interposed between
CC   the complementarity determining regions (CDRs)

PT   Novel humanized antibody derived from a murine antibody that specifically
PT   binds tumor-associated glycoprotein-72, useful for treating and detecting
PT   cancer.
XX
PS   Claim 2; Fig 2; 29pp; English.
XX
CC   The present invention relates to a novel humanised monoclonal antibody,
CC   and its fragments which specifically binds tumour-associated glycoprotein
CC   -72 (TAG-72), where the humanised monoclonal antibody is derived from a
CC   murine monoclonal antibody (e.g. CC49) that binds TAG-72. The humanised
CC   monoclonal antibody, and its fragments are useful for the treating and
CC   detection of TAG-72 cancers which express TAG-72 (e.g. colon cancer). The
CC   cancer is detected by the immunodetection of in vivo tumour cells, which
CC   may be removed by surgical excision. The humanised monoclonal antibody of
CC   the invention is useful as a immunodiagnostic agent both in vivo and in
CC   vitro, and also for repeated monitoring of the disease status of a
CC   patient. The present sequence represents human REI framework region
CC   (REIVK)

PT Novel humanized monoclonal antibody which specifically binds tumor-
PT associated glycoprotein-72 useful for treating cancer and in vivo imaging
PT of tumors or cancer cells expressing the tumor-associated glycoprotein-
PT 72.
XX
PS Claim 2; Fig 2; 29pp; English.
XX
CC The invention relates to a humanised antibody (or its fragment) which
CC specifically binds tumour-associated glycoprotein 72 (TAG-72) (the
CC antibody or its fragment is derived from a murine antibody which
CC specifically binds TAG-72). The humanised antibody is useful for in vivo
CC treatment of cancer, by intravenously administering a radionuclide-
CC labelled antibody, detecting tumour cells using a radionuclide activity
CC probe, and removing the detected tumour cells by surgical excision. The
CC radionuclide is (125)I or (131)I. A composition containing the humanised
CC antibody is useful for in vivo treatment of a mammal having a TAG-72
CC expressing cancer. A composition containing the humanised antibody is
CC useful for in vitro immunodetection of TAG-72 expressing cancer cells,
CC where the antibody or its fragments of the composition are bound to a
CC solid support and also for in vivo tumour imaging. The humanised
CC antibodies have little or no reduced immunogenicity in humans over murine
CC and chimeric antibodies and have improved serum clearance and metabolic
CC properties. The antibodies can be used over prolonged time periods. The
CC present sequence represents the amino acid sequence of the human REI
CC antibody framework region

CC   -!- MISCELLANEOUS: The structure of the V region was determined by
CC       molecular replacement methods using the known structure of the V
CC       region of the kappa chain REI.
CC   -!- MISCELLANEOUS: The C region of this chain has the INV (3) marker.
CC   -!- MISCELLANEOUS: This is a Bence-Jones protein.

RT   "Amino acid sequence of the Fv region of a human monoclonal IgM
RT   (protein WEA) with antibody activity against 3,4-pyruvylated galactose
RT   in Klebsiella polysaccharides K30 and K33.";
RL   Proc. Natl. Acad. Sci. U.S.A. 80:4837-4841(1983).
CC   -!- MISCELLANEOUS: This chain was obtained from a monoclonal antibody
CC       against 3,4-pyruvylated galactose and isolated from a patient with
CC       Waldenstrom's macroglobulinemia.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SUMMARIES

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SUMMARIES

XX
CC The human framework sequence FR2 was used in the prodn. of humanised
CC monoclonal antibodies comprising antigen binding sites (CDRs) of non
CC human origen based on consensus sequence of CDRs. The sequence is a light
CC chain framework region. The humanised antibodies or their chimeric
CC variants may be used as therapeutic or diagnostic agents in order to
CC combat e.g. glioma, melanoma or carcinoma. See also AAR27299-300 and
CC AAR27037-51. (Updated on 25-MAR-2003 to correct PN field.)

PT Antibody against IL-6 - useful for the therapy and treatment of IL-6
PT related disorders.
XX
PS Claim 6; Page 64; 82pp; Japanese.
XX
CC The sequence of the mouse anti-human interleukin-6 (IL-6) antibody light
CC chain variable region framework region (FR) 2. The sequences of FR1-4
CC (AAR77204-7) were used in conjunction with the complementarity
CC determining regions 1-3 (AAR77201-3) to construct a chimaeric antibody
CC against human interleukin-6 (IL-6). The vectors AAQ75914-7 express
CC constructs encoding fragments of a chimaeric antibody to the human IL-6
CC comprising (a) a light chain with (i) a variable region containing 3 CDR
CC (AAR77201-3) inserted into several framework regions (FR) (AAR77204-7)
CC and (ii) a human light chain constant region and (b) a heavy chain with
CC (i) a variable region containing 3 CDR (AAR77212-4) inserted into FR
CC (AAR77215-8) and (ii) a human light chain constant region. The FR of the
CC light chain may be mouse derived (AAQ75888) or from the human antibody
CC REI. The heavy chain FR may also be mouse derived (AAQ75889) or from the
CC human antibody DAW. The antibodies can be used in the treatment of IL-6
CC related disorders. The antibodies are useful as they have low
CC antigenicity due to the use of human derived sequences and low
CC antigenicity mouse derived sequences. (Updated on 25-MAR-2003 to correct
CC PN field.)

PT   New humanised anti-CEA monoclonal antibody - having engrafted murine
PT   CDRs, used for diagnosis, imaging and therapy of CEA-producing cancers.
XX
PS   Claim 7; Page 39; 62pp; English.
XX
CC   New humanised monoclonal antibodies (MAbs) comprising the complementary
CC   determining regions (CDRs) of a parental murine class III anti-
CC   carcinoembryonic (CEA) MAb engrafted to the framework regions (FRs) of a
CC   heterologous antibody which can be derived from any species including
CC   human, retain the anti-CEA binding specificity of the parental murine MAb
CC   but are less immunogenic in a human subject than the parental MAb. The
CC   humanised antibodies can be used in diagnosis, imaging and therapy of CEA
CC   -producing cancers and patients receiving the humanised antibodies and
CC   conjugates show improved therapeutic results, decreased immune responses
CC   and decreased immune-mediated adverse effects compared to the parent
CC   antibody. This sequence corresponds to the second framework region of the
CC   light chain of the humanised MAb. See AAR97313-97333

PS Claim 17; Page 269; 291pp; Japanese.
XX
CC The present invention describes chimeric antibody (Ab) heavy (H) chains
CC containing the variable region of the H chain of a mouse monoclonal Ab
CC recognising human tissue factor (hTF) and the constant region of the H
CC chain of a human Ab. The variable region is one of six specified
CC sequences (which are the H chain variable regions from mouse monoclonal
CC Ab's ATR-2,3,4,5,7 or 8). Also described are chimeric Ab light (L) chains
CC containing the variable region of the L chain of a mouse monoclonal Ab
CC recognising human tissue factor (hTF) and the constant region of the L
CC chain of a human Ab, the variable region being one of six specified
CC sequences (which are the L chain variable regions from mouse monoclonal
CC Ab's ATR-2,3,4,5,7 or 8). The chimeric Ab's can be used for the treatment
CC and prevention of thrombotic disease, especially of disseminated
CC intravascular coagulation (DIC). The humanised antibody has the high hTF
CC binding activity of the mouse monoclonal antibody but greatly reduced
CC immunogenicity. AAZ33001 to AAZ33091 and Y527007 to AAY52767 represent
CC sequences used in the exemplification of the present invention

PT New antibody specific for human tumor necrosis factor (TNF)-alpha, useful
PT for treating TNF-alpha-mediated diseases, e.g. congestive heart failure,
PT septic or endotoxic shock, cachexia, adult respiratory distress syndrome.
XX
PS Example 1; Fig 1; 119pp; English.
XX
CC The invention relates to an antibody molecule having specificity for
CC human tumour necrosis factor-alpha (TNFalpha) comprising a heavy or light
CC chain. The antibody or the compound comprising the antibody is useful for
CC treating or manufacturing a medicament for treating a pathology mediated
CC by TNFalpha, such as rheumatoid or osteo-arthritis. TNFalpha mediated
CC diseases which can be treated by the antibody include sepsis, congestive
CC heart failure, septic or endotoxic shock, cachexia, adult respiratory
CC distress syndrome, acquired immunodeficiency syndrome (AIDS), allergies,
CC psoriasis, tuberculosis, inflammatory bone disorders, blood coagulation
CC disorders, burns, rejection episodes following organ or tissue
CC transplant, Crohn's disease and autoimmune diseases, such as thyroiditis.
CC The antibodies may also be used to reduce the side effects associated
CC with TNFalpha generation during neoplasty therapy, to eliminate or reduce
CC shock-related symptoms associated with the treatment or prevention of
CC graft rejection by use of an anti-lymphocyte antibody, for treating multi
CC -organ failure, or in the diagnosis and imaging of disease states
CC involving elevated levels of TNF alpha. The present sequence is human
CC group 1 consensus peptide used in the exemplification of the invention

PT Preparing immunoglobulin binding protein array in plant cells by
PT transforming the cells with different polynucleotides encoding binding
PT protein polypeptides specific to ligand, selecting plant cells for
PT preparing array.
XX
PS Disclosure; Fig 1A; 129pp; English.
XX
CC The invention relates to transforming a population of cells (e.g. plant
CC cells), comprising using a library of two different polynucleotides
CC encoding different immunoglobulin binding protein (IgBP) polypeptides
CC that specifically bind to a ligand or form one or more disulphide bonds
CC with polypeptides in transfected cells, to generate an IgBP that binds to
CC a ligand, and transformed plant cells are selected, and preparing an IgBP
CC array in plant cells. At least one peptide sequence has at least 75%
CC sequence identity to a framework region (FR) of a native IgM, IgG, IgA,
CC IgD, IgE, IgY, kappa or lambda immunoglobulin molecule. The method is
CC useful for preparing an immunoglobulin binding protein array, preferably
CC heavy chain binding protein (CHBP) array in eukaryotic cells especially
CC plant cells (e.g. Agrobacterium tumefaciens or maize) or other eukaryotic
CC cells (e.g. insect cells or mammalian cells). The CHBP is useful for
CC discovery of e.g. screening assays of IgBPs having desired
CC characteristics. The present sequence is a mammalian immunoglobulin
CC derived peptide that may be incorporated into an IgBP of the invention

PT Humanized murine antibody that bind to human insulin receptor useful to
PT transport neuropharmaceutical agents, has heavy and light amino acid
PT chain having complementarity determining regions interspersed between
PT humanized framework regions.
XX
PS Claim 6; SEQ ID NO 39; 34pp; English.
XX
CC The invention describes a humanised antibody (I) that binds with the
CC human insulin receptor (HIR. The humanised antibody comprises a heavy
CC chain of amino acids comprising a constant region and a variable region
CC where the variable region has an amino end and a carboxyl end and
CC comprises complementarity determining regions (CDR) interspersed between
CC framework regions, the CDR comprises a first CDR located at the amino end
CC of the variable region, a third CDR located at the carboxyl end of the
CC variable region and a second CDR located between the first and third
CC CDRs. The framework regions comprise a first frame work region located
CC adjacent to the amino end of the first CDR, a second framework region
CC located between the first and second CDR, a third frame work region
CC located between the second and third CDR and a fourth frame work region
CC located adjacent to the carboxyl end of the third CDRs, where the
CC framework regions have been humanized, and a light chain of aminoacids
CC compatible with the heavy chain. (I) is useful for increasing the ability
CC of neuropharmaceutical agent to cross the human blood brain barrier which
CC involves linking the neuropharmaceutical agent to (I) by an avidin-biotin
CC linkage or by genetic fusion. (I) is useful for targeting a
CC pharmaceutical agent to the HIR in vivo which involves linking the
CC pharmaceutical agent to (I). A preparation (II) comprising (I) is useful
CC for intravenously administering a pharmaceutical agent to a human patient
CC which involves injecting (II) into blood stream of the human patient. (I)
CC is useful in combination with drug and diagnostic agent to treat human
CC beings in vivo. (I) is useful as Trojan horse to transport
CC neuropharmaceutical agents across blood brain barrier. This is the amino
CC acid sequence of the preferred sequence of framework region 2 (FR2) in
CC the humanised mouse antibody 83-14 light chain.

PT New isolated antibody that neutralizes botulinum neurotoxin type A,
PT useful for diagnosing botulism or for treating pathologies associated
PT with botulinum neurotoxin poisoning.
XX
PS Example 4; SEQ ID NO 246; 110pp; English.
XX
CC The invention describes an isolated antibody (I) that specifically binds
CC to an epitope specifically bound by an antibody expressed by a specific
CC clone where (I) binds to and neutralises botulinum neurotoxin type A
CC (BoNT/A). An isolated antibody (I) that specifically binds to an epitope
CC specifically bound by an antibody expressed by a clone chosen from clone
CC S25, C25, C39, 1C6, 3D12, B4, 1F3, huC25, Ar1, Ar2, WR1(V), WR1(T), 3-1,
CC 3-8, 3-10 and ING1, where (I) binds to and neutralizes botulinum
CC neurotoxin type A (BoNT/A). Also described are: a polypeptide (II)
CC comprising BoNT/A neutralising epitope having an epitope that is
CC specifically bound by an antibody expressed by clones as mentioned in (I)
CC ; producing (I); and a composition (III) comprising several anti-
CC botulinum neurotoxin antibodies, where each antibody is specific for a
CC different epitope of a botulinum neurotoxin and the combination of
CC antibodies shows greater toxin neutralisation than the single antibodies
CC in surplus. The following are disclosed: a pharmaceutical composition
CC comprising (I); and a kit comprising (I). (I) is useful for neutralising
CC BoNT/A antibody and for neutralising a botulinum neurotoxin which
CC involves contacting neurotoxin with (I) in surplus, where each of (I) is
CC specific for a different epitope of the botulinum neurotoxin and the
CC combination of antibodies shows greater toxin neutralisation than the
CC single antibodies in surplus. (I) is useful for diagnosing the botulism
CC or for treating pathologies associated with botulinum neurotoxin
CC poisoning. (I) exhibits specificity and affinity towards BoNT/A. (I)
CC enables rapid detection or diagnosis of botulism. This is the amino acid
CC sequence of mouse light chain anti-BoNT-antibody framework region 2.

PT Managing, treating or ameliorating in a human subject a respiratory
PT infection or its symptoms caused by bacteria, fungi or respiratory
PT syncytial virus by administering an IL-9 antagonist.
XX
PS Disclosure; SEQ ID NO 40; 276pp; English.
XX
CC The invention relates to a method of managing, treating or ameliorating a
CC respiratory infection or its symptom in a human subject by administering
CC an interleukin-9 (IL-9) antagonist. The method further comprises
CC administering to the subject an anti-respiratory syncytial virus (anti-
CC RSV) antigen antibody. The anti-RSV antigen antibody is palivizumab. The
CC method further comprises administering a leukotriene modifier, which is
CC montelukast, zafirlukast, pranlukast or zileuton. Also disclosed are: a
CC method of preventing the development, onset or progression of asthma or
CC one or more asthma-like symptoms in a child, a method of preventing,
CC managing, treating or ameliorating wheezing in a pre-term infant, infant
CC or child, a method of preventing, managing, treating or ameliorating
CC wheezing in a human subject, and a method of preventing, managing,
CC treating or ameliorating asthma or an allergy or its symptoms in a human
CC subject. Preventing the development, onset or progression of asthma or
CC one or more asthma-like symptoms in a child having or previously having a
CC respiratory infection comprises administering an IL-9 antagonist.
CC Preventing, managing, treating or ameliorating wheezing in a pre-term
CC infant, infant or child comprises administering an IL-9 antagonist. The
CC method further comprises administering at least one other therapy that is
CC not administration of an IL-9 antagonist. Preventing, managing, treating
CC or ameliorating wheezing in a human subject comprises administering an IL
CC -9 antagonist and at least one other therapy that is not administration
CC of an IL-9 antagonist. The therapy is an immunomodulatory agent, an anti-
CC inflammatory agent, an anti-viral agent, an antibiotic, an antifungal
CC agent or a mast cell modulator. The method further comprises
CC administering to the subject a leukotriene modifier, an anti-histamine,
CC an anti-immunoglobulin E (IgE) antibody, an anti-IL-4 antibody or a mast
CC cell protease inhibitor. Preventing, managing, treating or ameliorating
CC asthma or an allergy or its symptoms in a human subject comprises
CC administering an IL-9 antagonist and at least one other asthma or allergy
CC therapy. The IL-9 antagonist is an antibody that immunospecifically binds
CC to an IL-9 receptor (IL-9R) or its subunit or to an IL-9 polypeptide. The
CC methods are useful in managing, treating or ameliorating in a human
CC subject a respiratory infection or its symptoms caused by bacteria, fungi
CC or RSV. This sequence represents a framework region from an antibody
CC against IL-9.

PT New IL-9 antibody comprising a variable heavy or light domain or a
PT complementarity determining region having an amino acid sequence of e.g.,
PT 4D4, useful in treating or preventing e.g., respiratory infection or
PT inflammatory disorder.
XX
PS Disclosure; SEQ ID NO 40; 291pp; English.
XX
CC The invention describes a new IL-9 antibody comprising: a variable heavy
CC (VH) or variable light (VL) domain having an amino acid sequence of the
CC VH or VL domain of 4D4, 4D4 H2-1 D11, 4D4com-XF9, 4D4com-2F9, 7F3, 71A10,
CC 22D3, 7F3com-2H2, 7F3com-3H5 or 7F3com-3D4; or a complementarity
CC determining region (CDR) having an amino acid sequence of a CDR of 4D4,
CC 4D4 H2-1 D11, 4D4com-XF9, 4D4com-2F9, 7F3, 71A10, 22D3, 7F3com-2H2,
CC 7F3com-3H5 or 7F3com-3D4. The antibody immunospecifically binds to a
CC human IL-9 polypeptide. Also described are: a pharmaceutical composition
CC comprising the IL-9 antibody and a carrier; a method for preventing,
CC treating, managing or ameliorating a disease or disorder characterised by
CC aberrant expression or activity of an IL-9 polypeptide or an IL-9R; a
CC method of diagnosing, prognosing, or monitoring a disorder or disease
CC characterised by aberrant expression or activity of an IL-9 polypeptide
CC or aberrant expression or activity of an IL-9R; a kit comprising the
CC antibody and instructions for use, in one or more containers; and an
CC article of manufacture comprising a packaging material and a
CC pharmaceutical agent contained within the packaging material, where the
CC pharmaceutical agent comprises the IL-9 antibody and a carrier. The IL-9
CC antibody is useful in preparing a composition for diagnosing, treating or
CC preventing a disease or disorder characterised by aberrant expression or
CC activity of an IL-9 polypeptide or an IL-9R, e.g., respiratory infection
CC caused by bacteria or respiratory syncytial virus, parainfluenza virus or
CC human metapneumovirus, inflammatory disorder such as asthma, allergy or

```

PT   New recombinant antibody derived from murine antibody 14F7, useful for
PT   treatment and detection of malignant tumors, is specific for the
PT   ganglioside N-glycolyl-GM3, has reduced immunogenicity.
XX
PS   Claim 14; Page 26; 54pp; Spanish.
XX
CC   The invention relates to a recombinant antibody (rAb), derived from the
CC   murine monoclonal antibody 14F7 (produced by hybridoma ECACC 98101901),
CC   in which the complementarity determining regions (CDR) have the following
CC   sequences: heavy chain: CDR1, Ser-Tyr-Trp-Ile-His; CDR2, Tyr-Ile-Asp-Pro-
CC   Ala-Thr-Ala-Tyr-Thr-Glu-Ser-Asn-Gln-Lys-Phe-Lys-Asp; CDR3, Glu-Ser-Pro-
CC   Arg-Leu-Arg-Arg-Gly-Ile(Tyr) 3 Ala-Met-Asp-Tyr; light chain: CDR1, Arg-
CC   Ala-Ser-Gln-Ser-Ile-Ser-Asn-Asn-Leu-His; CDR2, Tyr-Ala-Ser-Gln-Ser-Ile-
CC   Ser; CDR3, Gln-Gln-Ser-Asn-Arg-Trp-Pro-Leu-Thr. The rAb and its
CC   derivatives recognize specifically the ganglioside N-glycoly-GM3, so
CC   inhibit angiogenesis. The rAb, and derived single-chain Fv fragments, are
CC   used, when labelled with a radioisotope, for treatment of malignant
CC   tumors (especially of the breast, or melanomas), including metastases and
CC   relapses; also when appropriately labelled, they are useful for in vivo
CC   localization and detection of tumors. The rAb and its derivatives are
CC   less immunogenic in humans than 14F7 itself. This sequence corresponds to
CC   the mutated framework region 2 derived from the mouse antibody 14F7 and
CC   used to generate the antibody of the invention.

PT   Preparing a tumor necrosis factor-alpha antibody having a heavy and light
PT   chain comprises fermenting a cell mixture, forming a cell pellet and
PT   allowing the pellet to stand for a hold time.
XX
PS   Example 4; SEQ ID NO 85; 125pp; English.
XX
CC   The invention relates to a novel method for preparing an antibody with a
CC   heavy and light chain comprising fermenting a cell mixture, where the
CC   cells are capable of expressing the light and heavy chain, separating the
CC   cells from the supernatant to form a cell pellet, allowing the pellet to
CC   stand for a hold time, extracting the cell pellet and producing the TNF
CC   (tumor necrosis factor)-alpha antibody fragment or its dimer or adduct.
CC   The antibody of the invention demonstrates antiarthritic, antirheumatic,
CC   gastrointestinal-gen. and antiinflammatory activities and may be useful
CC   for treatment of rheumatoid arthritis or an inflammatory bowel disease,
CC   such as Crohn's disease. Currently used anti-TNF-alpha monoclonal
CC   antibodies, such as infliximab and etanercept, have limited success in
CC   the treatment of disease since they must be administered frequently or
CC   intravenously. Furthermore, both of these molecules comprise large
CC   proteins and as such are difficult and expensive to manufacture. The
CC   current sequence is that of a human group 1 consensus light chain
CC   framework region peptide of the invention which may be used to construct
CC   a chimeric antibody targeted to TNF-alpha.

PT New human antibody or antibody fragment which binds to a sequence of the
PT C-terminal domain of Apolipoprotein E (ApoE-CTD), useful for
PT manufacturing a medicament for treating or preventing an amyloid disorder
PT e.g. Alzheimers disease.
XX
PS Example 8; Page 97; 392pp; English.
XX
CC The present invention relates to a human antibody or antibody fragment,
CC which binds to the C-terminal domain of Apolipoprotein E (ApoE-CTD;
CC AEA44803) and also to human plaques. The antibody or its fragment is
CC useful for manufacturing a medicament for treating or preventing an
CC amyloid disorder such as Alzheimers disease, primary systemic
CC amyloidosis, secondary systemic amyloidosis, senile systemic amyloidosis,
CC familial amyloid polyneuropathy I, familial amyloid polyneuropathy III,
CC familial non-neuropathic amyloidosis, hereditary cerebral amyloid
CC angiopathy, Familial British Dementia, Hemodialysis-related amyloidosis,
CC Familial amyloidosis (Finnish type), Familial subepithelial corneal
CC amyloid, type II diabetes, Hereditary renal amyloidosis, Pituitary-gland
CC amyloidosis, injection localized amyloidosis, Medullary carcinoma of the
CC thyroid, Atrial amyloidosis, Familial Danish dementia (FDD), Downs
CC syndrome, Spongiform encephalopathies, Sporadic Creutzfeldt-Jakob
CC disease, Gerstmann-Straussler-Scheinker Disease (GSS), Kuru, Parkinsons
CC disease, Huntingtons disease, Familial amyotrophic lateral sclerosis, and
CC chronic obstructive pulmonary disease. The present sequence was used to
CC illustrate the invention.

XX
CC This invention relates to novel substantially pure polypeptide comprising
CC a fully human or humanized chimpanzee monoclonal antibody that binds or
CC neutralizes dengue type 1, 2, 3, and/or 4 virus, a monoclonal antibody
CC that binds the antigen to which monoclonal antibody 5H2 (ATCC Accession
CC No. PTA-5662) binds, or a monoclonal antibody that binds the antigen to
CC which monoclonal antibody 1A5 (ATCC Accession No. PTA-6265) binds. The
CC invention may be useful for the development of compounds with a virucide
CC activity acting by viral neutralization. The invention is useful as
CC pharmaceutical preparation and a diagnostic preparation for treatment and
CC diagnosis of dengue virus disease. The present sequence is that of a 1A5
CC light chain peptide which was used during the development of the novel
CC anitbodies of the invention.

PT New composition comprising a large enzyme and a blood-brain barrier
PT targeting agent, useful for treating lysosomal storage disorders.
XX
PS Disclosure; SEQ ID NO 39; 48pp; English.
XX
CC The present invention relates to a composition, which is capable of
CC delivering a large enzyme, such as a lysosomal enzyme, across the blood
CC brain barrier. The composition comprises a large enzyme and a blood-brain
CC barrier targeting agent, where the blood brain barrier targeting agent is
CC linked to the large enzyme. The blood brain barrier targeting agent can
CC be a monoclonal antibody (MAb) to the insulin receptor such as murine MAb
CC 83-14, which binds to the human insulin receptor (HIR). The composition
CC is useful for treating lysosomal storage disorders and other conditions
CC where the enzyme being delivered is missing from the brain cell. The
CC present sequence is a framework region (FR) of the murine light chain
CC variable region (VL) of MAb 83-14.

PT   New antibodies binding to an epitope on gp39, useful for preventing graft
PT   rejection, or for treating autoimmune diseases (e.g. diabetes, asthma or
PT   multiple sclerosis), and non-autoimmune diseases (e.g. graft-versus-host
PT   disease).
XX
PS   Disclosure; Page 46; 130pp; English.
XX
CC   The invention relates to an antibody which binds to an epitope on gp39,
CC   is new, where the epitope is distinct from the epitope bound by IDEC-131,
CC   and the antibody has a non-agonistic effect on T-cell activation and
CC   inhibits gp39/CD40 interaction. Also included are: (1) an improved method
CC   of treating a disease by modulating gp39 expression or inhibiting the
CC   gp39/CD40 interaction comprising administering an antibody specific for
CC   gp39 that inhibits the gp39/CD40 interaction and is non-agonistic of T-
CC   cell activation; (2) an antibody which antagonises B-cell differentiation
CC   and antibody production, and is non- agonistic of T-cell activation; (3)
CC   a DNA sequence which encodes an antibody defined above; (4) an expression
CC   vector, which contains a DNA sequence of (3); (5) a method of suppressing
CC   humoral and/or cellular immune responses against cells or vectors
CC   administered during cell or gene therapy comprising further administering
CC   prior, during or after gene therapy, an antibody defined above; and (6)
CC   an improved method of treatment which involves the transplantation of
CC   cells, tissues or organs of the same or different species into a subject,
CC   where the improvement comprises administering an antibody defined above
CC   prior, during or after transplantation, to suppress immune responses
CC   against the transplanted cell, tissue or organ, or to suppress immune
CC   responses elicited by the transplanted cell, tissue or organ against the
CC   host. The antibody is useful for preventing graft rejection, and for
CC   treating autoimmune diseases, e.g., rheumatoid arthritis, multiple
CC   sclerosis, diabetes, asthma, multiple sclerosis, allergic conditions,
CC   diabetes mellitus, or systemic lupus erythematosus, as well as non-
CC   autoimmune diseases such as graft-versus-host disease (many other
CC   diseases and conditions are given in the specification). The antibodies
CC   are also useful in gene or cellular therapy, and to inhibit humoral and
CC   cellular immune responses against viral vectors. The present sequence is
CC   a framework region (FR) fragment of a human anti-gp39 antibody used to
CC   determine which amino acids should be humanised in a mouse anti-gp39
CC   molecule

PT   Isolated microfibrillar protein for alleviating abdominal aortic aneurysm
PT   disease is purified from human aortic tissue and binds immunoreactively
PT   with immunoglobulin.
XX
PS   Example 3; Col 30; 70pp; English.
XX
CC   The present invention relates to an isolated microfibrillar protein of
CC   approximately 40kD. The protein is isolated from human aortic tissue and
CC   binds immunoreactively with immunoglobulin purified from human abdominal
CC   aortic aneurysm (AAA) tissue. The protein is referred to as aortic
CC   aneurysm-associated antigenic protein (AAAP). The protein is capable of
CC   forming a disulphide bonded dimer. The protein is immunoreactive with
CC   human kappa immunoglobulin. Also included in the invention are
CC   recombinantly produced human AAA proteins. AAAP shows regions of homology
CC   with the bovine microfibril associated glycoprotein MFAP-4 and also with
CC   fibrinogen and vitronectin. The isolated microfibrillar protein is useful
CC   for alleviating abdominal aortic aneurysm (AAA) disease and detecting the
CC   presence of AAA-associated immunoglobulin bound to the human aortic
CC   tissue. Antibodies directed against AAAP can be used to detect AAA
CC   disease. The recombinant protein can be used to induce tolerance to
CC   antigenic AAA protein in the subject e.g. human. This sequence represents
CC   an immunoglobulin kappa amino acid sequence. The sequence shares homology
CC   with the AAAP of the invention, it was used to identify and characterise
CC   AAAP

PT   Purified protein useful in diagnosing abdominal aortic aneurysm disease
PT   in subject, e.g. human, contains specified amino acids.
XX
PS   Disclosure; Col 71-72; 67pp; English.
XX
CC   The present invention relates to the isolation of a protein approximately
CC   40kDa which is purified from human aortic tissue. The protein is
CC   immunoreactive with abdominal aortic aneurysms(AAA)-associated
CC   immunoglobulin. The protein is useful for diagnosing AAA disease in a
CC   subject, e.g. human, by administering the protein or a composition
CC   comprising the protein. The inventive protein is capable of forming a
CC   disulphide-bonded dimer of 80 kDa. The present sequence of unknown
CC   function is given in the Sequence Listing but is not mentioned elsewhere
CC   in the specification.

PT   Novel non-murine antibody that competes with monoclonal antibody RX1 for
PT   binding to macrophage colony stimulating factor, useful for treating
PT   hypogonadism, hypercalcemia, rickets, scurvy, homocystinuria, cancer,
PT   osteoporosis.
XX
PS   Disclosure; SEQ ID NO 66; 269pp; English.
XX
CC   The invention describes a non-murine antibody (I) that competes with
CC   monoclonal antibody RX1 for binding to macrophage colony stimulating
CC   factor (M-CSF) by more than 75%, where the monoclonal antibody RXI has
CC   the heavy chain and light chain amino acid sequences having a fully
CC   defined 447 amino acids (SEQ ID No. 2) and 214 amino acids (SEQ ID No. 4)
CC   sequences given in the specification, respectively. (I) is useful for
CC   preventing a subject afflicted with a disease that causes or contributes
CC   to osteolysis, where the antibody effectively reduces the severity of
CC   bone loss associated with the disease. The disease is chosen from
CC   metabolic bone diseases associated with relatively increased osteoclast
CC   activity, including endocrinopathies, hypercalcemia, deficiency states,
CC   chronic diseases, and hereditary diseases, cancer, osteoporosis,
CC   osteopetrosis, inflammation of bone associated with arthritis and
CC   rheumatoid arthritis, periodontal disease, fibrous dysplasia, and/or
CC   Paget's disease. (I) is useful for preventing or treating metastatic
CC   cancer. Antibodies of the invention are useful for preventing or reducing
CC   bone loss; osteolysis; metastatic cancer to bone and cancer. (I) is
CC   useful for manufacturing a medicament for preventing or reducing bone
CC   loss in a patient exhibiting osteolysis, manufacturing a medicament for
CC   treating a patient afflicted with a disease that causes or contributes to
CC   osteolysis, and metastatic cancer to bone in a patient suffering from
CC   metastatic cancer, for manufacturing a medicament for treating a patient
CC   having cancer. (I) in synergistic combination, is useful for preparing a
CC   medicament for treating a patient exhibiting osteolysis. This is the
CC   amino acid sequence of human variable light chain region (hVK1) used in a
CC   comparison with macrophage colony stimulating factor (M-CSF) specific
CC   murine antibody RX1 light chain.

CC bone loss associated with the disease. The disease is chosen from
CC metabolic bone diseases associated with relatively increased osteoclast
CC activity, including endocrinopathies, hypercalcemia, deficiency states,
CC chronic diseases, and hereditary diseases, cancer, osteoporosis,
CC osteopetrosis, inflammation of bone associated with arthritis and
CC rheumatoid arthritis, periodontal disease, fibrous dysplasia, and/or
CC Paget's disease. (I) is useful for preventing or treating metastatic
CC cancer. Antibodies of the invention are useful for preventing or reducing
CC bone loss; osteolysis; metastatic cancer to bone and cancer. (I) is
CC useful for manufacturing a medicament for preventing or reducing bone
CC loss in a patient exhibiting osteolysis, manufacturing a medicament for
CC treating a patient afflicted with a disease that causes or contributes to
CC osteolysis, and metastatic cancer to bone in a patient suffering from
CC metastatic cancer, for manufacturing a medicament for treating a patient
CC having cancer. (I) in synergistic combination, is useful for preparing a
CC medicament for treating a patient exhibiting osteolysis. This is the
CC amino acid sequence of human variable light chain region (HK1) used in a
CC comparison with macrophage colony stimulating factor (M-CSF) specific
CC murine antibody RX1 light chain.

PT Preparing monomeric cytotoxic drug/carrier conjugates for treating
PT cancer, comprises incubating a cytotoxic drug derivative with a
PT proteinaceous carrier in a non-nucleophilic, protein-compatible buffered
PT solution.
XX
PS Disclosure; Page 161; 0pp; English.
XX
CC The present invention relates to a method of preparing monomeric
CC cytotoxic drug/carrier conjugates with reduced low conjugated fraction,
CC which comprises incubating a mixture of a cytotoxic drug derivative and a
CC proteinaceous carrier in a non-nucleophilic, protein-compatible buffered
CC solution to produce a monomeric cytotoxic drug/carrier conjugate. The
CC method is useful for producing monomeric cytotoxic drug/carrier
CC conjugates having reduced low conjugated fraction. The conjugates or
CC compositions comprising the monomeric cytotoxic drug derivative/carrier
CC conjugates are useful for treating a proliferative disorder, particularly
CC cancer (e.g. carcinoma or sarcoma) or a B-cell malignancy, such as
CC leukaemia expressing cell surface antigen CD22, lymphoma expressing cell
CC surface antigen CD22, Non-Hodgkin's lymphoma. The present sequence is a
CC polypeptide used in the exemplification of the invention

PT Characterizing a viral infection in a host, for developing treatment for
PT severe acute respiratory syndrome-coronavirus (SARS-CoV), by determining
PT homology profile of a viral-based sequence element with an endogenous
PT host element.
XX
PS Example 1; Fig 10; 166pp; English.
XX
CC The invention relates to a novel method for characterising a viral
CC infection in a host. The method comprises identifying at least one viral-
CC based sequence element in a biological sample obtained from the host,
CC determining a homology profile of the viral-based sequence element with
CC at least one endogenous host element and characterising the viral
CC infection based on the homology profile, where the homology profile is
CC indicative of a viral behaviour of the viral infection in the host. The
CC method of the invention demonstrates virucide applications and may be
CC useful for preparing a medicament for detecting and/or treating a viral
CC infection or related condition, such as an autoimmune disease e.g. type
CC II cryoglobulinaemia, or lymphoproliferative disorder. The viral
CC infection may be due to HCV (Hepatitis C virus), HIV or a member of a
CC Retroviridae, Flaviviridae, Herpesviridae, Papillomaviridae or
CC Coronaviridae virus family. Treatment of the infection may utilise
CC vaccine or gene therapy. The target compound of the invention may be
CC useful for detecting the presence of a virus in a biological sample or
CC for manufacturing a medicament for treating SARS coronavirus (SARS-CoV)
CC and/or Human T-lymphotropic virus 1 (HTLV-I) infection. The methods are
CC further useful for developing treatment regimes to target genotype-
CC specific viral variants. The current sequence is that of an unidentified
CC immunoglobulin light chain variable region protein of the invention.

XX
PS Disclosure; SEQ ID NO 10; 306pp; English.
XX
CC The invention relates to at least one isolated mammalian amyloid antibody
CC comprising at least one variable region comprising at least one heavy
CC chain and at least one light chain, of a fully defined sequence of SEQ ID
CC NOS: 48, 49, 59, 60, 69, 70, 79 and 80, respectively. Also described are:
CC (i) at least one isolated mammalian amyloid antibody that binds to the
CC same region of an amyloid polypeptide as an antibody comprising at least
CC one heavy chain or light chain complementarity determining region (CDR)
CC having the amino acid sequence of at least one of SEQ ID NO: 73-78, (ii)
CC at least one isolated mammalian amyloid antibody, comprising at least one
CC human CDR, where the antibody specifically binds at least one epitope
CC selected from amino acids 2-7, 3-8, 33-42, or 34-40 of a fully defined
CC sequence of 42 amino acids (SEQ ID NO: 50), (iii) an isolated nucleic
CC acid encoding at least one of any of the isolated mammalian amyloid
CC antibodies mentioned and having at least one human CDR of a fully defined
CC sequence of SEQ ID NO: 51, 52, 61, 62, 71, 72, 81 and 82, (iv) an
CC isolated nucleic acid vector comprising an isolated nucleic acid encoding
CC an amyloid antibody, (v) a prokaryotic or eukaryotic host cell comprising
CC an isolated nucleic acid encoding an amyloid antibody, (vi) a method of
CC producing at least one amyloid antibody, (vii) a composition comprising
CC at least one of any of the isolated mammalian amyloid antibodies
CC mentioned, and at least one pharmaceutical carrier or diluent, (viii) an
CC anti-idiotype antibody or fragment that specifically binds at least one
CC of the amyloid antibodies mentioned, (ix) a method of diagnosing or
CC treating an amyloid related condition in a cell, tissue, organ or animal,
CC comprising contacting or administering a composition comprising at least
CC one of the antibodies mentioned, with, or to, the cell, tissue, organ or
CC animal, (x) a medical device comprising at least one amyloid antibody
CC mentioned, where the device is suitable for contacting or administering
CC at least one amyloid antibody, (xi) an article of manufacture for human
CC pharmaceutical or diagnostic use, comprising packaging material and a
CC container comprising a solution or a lyophilized form of at least one of
CC the amyloid antibodies mentioned, and (xii) a method of producing at
CC least one of the isolated mammalian amyloid antibodies, comprising
CC providing a host cell or transgenic animal or transgenic plant or plant
CC cell capable of expressing the antibody in recoverable amounts. The
CC methods and compositions of the present invention are useful for
CC producing therapeutic compositions and devices for treating amyloid-
CC associated disorders, such as Alzheimer's disease, cancer, allergies,
CC autoimmune disease, Parkinson's disease, AIDS, multiple sclerosis,
CC migraine, dementia and infections. This sequence represents a light chain
CC variable region useful in the antibody of the invention.

PT New transgenic non-human mammals - having an inactivated immunoglobulin
PT locus and a near complete human immunoglobulin locus, used for production
PT of human antibodies.
XX
PS Disclosure; Page 77; 128pp; English.
XX
CC AAW62793-822 represent fragments of human antibodies produced by
CC transgenic Xenomice, created using the method of the invention. The
CC specification describes a transgenic non-human mammal which has genome
CC modifications that comprise an inactivated endogenous immunoglobulin (Ig)
CC locus, so that the mammal does not display normal B-cell development. The
CC modified genome also has an inserted human heavy chain Ig locus in
CC germline configuration, the human heavy chain Ig locus comprising a human
CC micro constant region and regulatory and switch sequences, human J-H
CC genes, human D-H genes, and human V-H genes and an inserted human kappa
CC light chain Ig locus in germline configuration, the human kappa light
CC chain Ig locus comprising a human kappa constant region, J-kappa genes,
CC and V-kappa genes, where the number of V-H and V-kappa genes inserted are
CC selected to restore normal B-cell development in the mammal. The
CC transgenic animals have a near complete human Ig locus, including both a
CC human heavy chain locus and a human kappa light chain locus. They can be
CC used for the production of human antibodies when exposed to particular
CC antigens e.g. when exposed to human IL-8, EGFR or TNF- alpha the mice
CC will produce antibodies to IL-8, EGFR or TNF- alpha respectively

CC   -!- MISCELLANEOUS: The structure of the V region was determined by
CC       molecular replacement methods using the known structure of the V
CC       region of the kappa chain REI.
CC   -!- MISCELLANEOUS: The C region of this chain has the INV (3) marker.
CC   -!- MISCELLANEOUS: This is a Bence-Jones protein.

38.198 Million cell updates/sec

Title: US-10-755-382-27
Perfect score: 86
Sequence: 1 WYQQKPGKAPKLLIY 15

Scoring table: BLOSUM62
Gapop 10.0 , Gapext 0.5

Searched: 572060 seqs, 82675679 residues

Total number of hits satisfying chosen parameters: 572060

Minimum DB seq length: 0
Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0%
Maximum Match 100%
Listing first 1000 summaries

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
